Introduction

The Informal Functional Hearing Evaluation (IFHE) is meant to guide the teacher of the deaf and hard of hearing (TDHH), the teacher of the visually impaired (TVI), and the teacher of students with DeafBlindness (TDB) in determining the impact of a potential hearing loss on educational functioning for students with visual impairments and multiple disabilities.

The IFHE can serve as a guide for determining what accommodations are needed in the classroom, home, and community environments to promote student access to information. Because of the difficulty that a loss in both distance senses presents, a child who is deafblind may demonstrate a delay in identifying, understanding, and interpreting sounds and their sources. This delay can be pronounced, even if formal testing indicates a minimal loss of vision and hearing.

If an educator is concerned that a student with a visual impairment may also have a hearing loss:

- IFHE can provide information about how the child is currently using his/her hearing in a variety of settings and then guide the IEP team in developing instructional strategies to address the child’s dual sensory needs.
- IFHE can document concerns when a student is unable to participate in formal testing (a lack of formal language, health issues, or concerns regarding sedation to test for an auditory brainstem response (ABR)).
- IFHE can help shape programming considerations for a student with deafblindness.
- IFHE can serve as a guide for determining what accommodations are needed in the classroom, home, and community environments to promote student access to information.
- IFHE can be used as a compliment before formal testing to provide valuable information to the audiologist or ENT. **IFHE should not serve as sole documentation of hearing impairment; formal testing is needed.**
Instructions for Completing IFHE

The Informal Functional Hearing Evaluation (IFHE) should be completed by the educational team under the guidance of the TDHH, TDB, and/or speech-language pathologist, in collaboration with the TVI. The process consists of the following components:

• Parent/Staff Interview: Discuss observed behaviors related to the child’s hearing in home, classroom, and community settings to learn about his/her auditory functioning.

• Natural Observation: Watch the child in familiar environments, during familiar activities.

• Systematic Observation: Use information from formal hearing tests to observe behavior within familiar routines and record patterns that might indicate a child’s use of hearing.

Preparing for Natural and Systematic Observation

The graphic on the following page presents familiar and typical environmental sounds and their corresponding frequency levels. When designing the materials and protocols for your observations it is important to first review any existing audiological evaluations to determine the best available frequencies and degrees of hearing loss. Is it low-frequency or high-frequency loss? This information will help to collect sound sources to use when designing the routines that will serve your observations.

Routines add predictability and structure and should be used as the observational context for the IFHE. To learn more about the routines and to see some examples of routines that can be used to evaluate a child’s functional hearing, visit Communication for Children with DeafBlindness.

If no audiological evaluation exists, choose a wide range of sound sources with various frequencies, such as a drum, piano, whistle, vacuum cleaner, etc. Of course, the human voice is also a good sound source and should be used in all evaluations.
Figure 1 Frequency Spectrum of Familiar Sounds showing frequencies and intensity of various sound sources. Creative Commons image.
Example:

If the results of formal hearing tests indicate that the child should be able to hear loud low frequency sounds like a drumbeat. Set up a simple turn-taking game, beating a drum to see if the child participates. Does the child take a turn after you stop? If the child participates in this game, you can try similar interactions, with other sounds, that vary by pitch and loudness. Record your observations. It might take several repetitions of the game, across several days or weeks, before the child learns his or her role.

Determining Strengths & Needs

After compiling all of the information collected in interviews and observations, the TDHH, TDB, and/or speech-language pathologist should list the student’s strengths and needs in the areas of functional hearing to determine whether a referral for formal testing should be made.

- **Strengths**: Areas of functioning that can be identified and described that demonstrate the child’s attention to or understanding of sound.
- **Needs**: Areas of auditory functioning in which the student appears to demonstrate difficulty due to lack of auditory training.

Making Recommendations

Accommodations and instructional strategies to address functional hearing needs should be detailed in the **Recommendations** section of the report and provided to the IEP team. Recommendations should address the effects that a combined vision and hearing loss will have on the child’s ability to access instruction and environmental information. If possible, share the results of the IFHE with the audiologist prior to a formal hearing screening.

- Recommendations can be included in the students’ Communication Evaluation and/or the Learning Media Assessment.
• Recommendations can be used to develop a comprehensive list of accommodations to be implemented by the IEP team.
• Recommendations can be used to help design instructional strategies and an optimal learning environment before beginning a phase of diagnostic teaching. Strategies include specific focus on connecting sound sources to the person or object producing the sound during familiar activities and routines.
• Recommendations from the IFHE can be used in documenting student progress, implementing auditory training strategies, and applying information gained from formal testing results, thereby assisting the IEP team in determining whether a child meets eligibility for deafblindness.
Using the IFHE: Interview & Observation

Interview Worksheet

It is important to collect information from those who know how the child typically functions. This can include parents/caregivers, educational staff or members of the medical team. Use the questions and spaces below to record information from your interview(s).

<table>
<thead>
<tr>
<th></th>
<th>What sounds do you think the child hears?</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th></th>
<th>What reactions or behaviors make you think the child is hearing the sound?</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th></th>
<th>Does the child seem to associate a particular sound with a person or activity?</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.</td>
<td>(For example, the sound of the garage door opening causes the child to get excited because he knows his dad is home.)</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th></th>
<th>Does the child seem to have any favorite sounds, such as a song, a person’s voice, or a sound created by an object or animal?</th>
</tr>

<tr>
<td>---</td>
<td>-------------------------------------------------------------------------</td>
</tr>
<tr>
<td>11.</td>
<td>Does the child have a history of ear infections?</td>
</tr>
<tr>
<td>12.</td>
<td>Does/did anyone in the child’s family have a hearing loss?</td>
</tr>
<tr>
<td>13.</td>
<td>Has the child been treated with medicines for major infections, cancer, etc.?</td>
</tr>
</tbody>
</table>

Go to the Report Summary (page 17). Record information from your interviews on the section labeled Interview Worksheets.
Notes from Parent/Staff/Medical Team Interviews
Use the space below for any additional notes or summaries.
Observation Checklist

- Review existing documentation, including notes from the Parent/Medical Team Interview, to guide your natural and systematic observations of the student in a variety of settings.
- Use the checklist below to document and make notes on the child’s performance in the functional hearing categories listed.
- Record the results of your observations on the Summary Results of Informal Observations section of the report summary.

<table>
<thead>
<tr>
<th>Student Name:</th>
<th>Date Observed:</th>

</tbody>
</table>

Briefly describe the child’s state of awareness at the time of the assessment (e.g., excited, sleepy, highly aroused, agitated):
General Functioning and Awareness

1. Does the child show any awareness of any sensory information (visual, tactual, etc.)? How do you know this?

Yes    No

Describe

2. Does the child show any awareness of auditory information? How do you know this? (Example: Does the child demonstrate an association between movement cues and a pleasurable auditory stimulus or activity?)

   a. Contextual – Familiar sounds in a familiar routine/environment
   b. Out of context – Familiar sounds in an unfamiliar routine/environment
   c. Novel – New sounds in a familiar context/environment
   d. Novel/unfamiliar – New sounds in an unfamiliar environment

Yes    No

Describe
Sound is Meaningful

3. Does the child attend to an associated auditory stimuli with their sources?
   
   Yes  No
   
   □  □
   
   Describe

4. Does the child show anticipation of an event or recognition of a person or object through the use of hearing? (Example: The child giggles and claps her hands at the sound of her mother’s voice in another room or the music produced by a favorite toy hidden from view.)
   
   a. In familiar context
   b. In an unfamiliar context
   
   Yes  No
   
   □  □
   
   Describe
Auditory Patterning

5. Does the child show awareness of the start and cessation of sounds?

   Yes   No
   □     □

   Describe

6. Is there a difference in performance based on type of sound?
   a. Pitch (high vs. low)
   b. Rhythm (simple vs. complex)
   c. Intensity (loud vs. soft)
   d. Duration (short vs. long)
   e. Distance (near vs. far)
   f. Movement (moving toward vs. away from)
   g. Vowel sounds (in isolation)
   h. Consonant sounds (in isolation)
   i. Sound source (voice vs. environmental)
   j. Male vs. female voices
   k. Familiar vs. unfamiliar voices
   l. Specific type(s) of music
   m. Specific instrument(s)

   Yes   No
   □     □

   Describe
7. Is there a difference in behavior based on environment?
   a. Quiet vs. noisy
   b. Places with high levels of reverberation vs. places where reverberation is dampened (e.g., gym vs. carpeted classroom)
   c. Places with competing vocal and environmental sounds (e.g., teacher’s voice when AC turns on)
   d. Places with competing sensory information (lights, smells, etc.)

   Yes  No
   □    □

   Describe

8. Is there a delay in response? (latency)
   a. In quiet environments (e.g., carpeted room with little to no extraneous conversation, empty playground far removed from traffic noise)
   b. In noisy environments (e.g., gym, cafeteria, tiled classroom with multiple sound-emitting electronic devices and conversations)
   c. In familiar context
   d. In unfamiliar context

   Yes  No
   □    □

   Describe
9. Are there different responses based on the child’s bio-behavioral state or at various times of day?
   a. Before or after a meal
   b. Before or after medication
   c. Time of day
   d. Quiet alert or active alert vs. fussy or agitated

   Yes   No
   ■   ■
   Describe

10. Does the child recognize when an adult mimics hi/her vocalizations? (Example: The child stops moving or vocalizing when an adult attempts to mimic his vocalizations. The child then responds by repeating his previous vocalization.)
   a. Familiar adult with familiar pattern
   b. Unfamiliar adult with familiar pattern
   c. Familiar adult with random pattern
   d. Unfamiliar adult with random pattern

   Yes   No
   ■   ■
   Describe
11. Does the child try to mimic familiar vocal patterns?
   a. Mimics rhythm
   b. Mimics pitch
   c. Mimics vowel sounds
   d. Mimics consonant sounds
   e. Mimics animal sounds or funny sounds
   f. Mimics line from a song or rhyme

   Yes   No
   □     □

   Describe

Sound as Meaning
12. Does the child startle to sound but otherwise not pay much attention? (reflexive awareness)

   Yes   No
   □     □

   Describe
13. Does sound help the child enter and maintain a quiet alert or active alert state? (self-regulation)

Yes   No

Describe

14. Are there sounds that make the child fussy or agitated?

Yes   No

Describe

15. Does the child turn toward, move toward, or reach for a sound source?
   a. Familiar object or environmental sound
   b. Unfamiliar object or environmental sound
   c. Familiar human voice
   d. Unfamiliar human voice

Yes   No

Describe
Auditory Feedback

16. Does the child enjoy making noise, either with his or her mouth, by activating switches, hitting two objects together, playing musical instruments, etc.?
   Yes   No
   □     □

Describe

17. Does the child vocalize when amplification is turned on? (Example: The child consistently giggles or makes a “shhh” or “he” sound when amplification is engaged.)
   Yes   No
   □     □

Describe

18. Does the child vocalize in response to others’ vocal play?
   Yes   No
   □     □

Describe
Short-Term Auditory Memory

19. Does the child associate a particular sound with a particular event?
   - Yes
   - No

   [ ] [ ]

   Describe

20. Does the child attempt to repeat familiar vocal sequences or sounds?
   - Yes
   - No

   [ ] [ ]

   Describe

Linguistic Auditory Processing

21. Does the child recognize any common words, especially his/her name?
   - Yes
   - No

   [ ] [ ]

   Describe
22. Does the child try to use any sounds consistently to communicate?
   Yes □ No □

Describe

Notes from Natural and Systematic Observation
These notes should help you in preparing the final report.

Putting It All Together: Report Summary

Report Summary
The IFHE Report Summary is an opportunity to organize information from the inventory as well as information from interviews, information observations or other formal testing and assessments. The report summary can also serve as a place to gather all medical and formal audiological information into one document.

Interview Worksheets
Use the space below to summarize information collected from the interviews.
